Most identity workflows still run on tickets and manual steps.

A terminated contractor still has access weeks after their last day, because no one worked the offboarding ticket. A new hire waits days to log in. Dormant SaaS seats keep billing. Each is a small task no one quite owns, and identity is full of them: joiner-mover-leaver changes, license cleanup, risk alerts, and task hand-offs all run across dozens of systems on tickets, spreadsheets, and someone remembering to act.

Meanwhile, work is moving faster. AI agents and service accounts now spin up daily. By 2028, the average Fortune 500 will run more than 150,000 AI agents.¹ Every one needs lifecycle management and governance, but manual processes can't keep up, and every workflow that depends on a human is a potential productivity block, security gap, or both.

Automations for every use case

Streamline lifecycle events

Onboard, transfer, and offboard every identity — human and AI — across every system, eliminating tickets and manual steps.

Stay ahead of risk

Auto-revoke unused access, monitor high-risk grants, and get alerted when local accounts are created, shrinking the attack surface.

Lower IT costs and effort

Clean up dormant licenses, automate helpdesk tasks, and let end users and agents trigger workflows on demand, saving time for IT teams.

Automate every identity workflow.

C1 Automations replaces manual identity processes with autonomous workflows that execute across every connected system, saving teams time and helping the business move at the speed of AI. Triggers fire from HR events, role changes, risk signals, usage thresholds, or schedules. Actions execute against policy without a human in the loop, with guardrails and approvals where you need them.

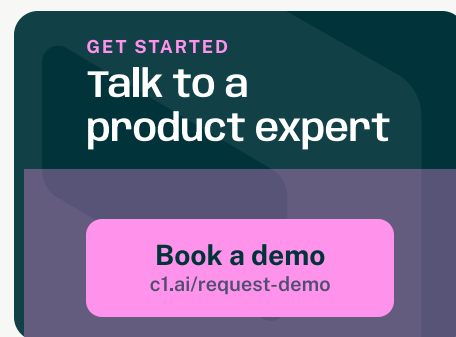

Building workflows is easy for any user with C1's Automation Architect. Describe the workflow in plain language — name the trigger, the actions, and the systems — and ship it in a few clicks. Need a step tailored to your environment? Use AI to write and embed custom Functions in any automation. C1 takes care of the work, from lifecycle to remediation, so governance moves faster at scale.

One automation control plane for every identity and system

- 
Lifecycle that runs on triggers, not tickets.
 New-hire provisioning, role changes, and offboarding fire automatically from an HR event or a schedule, and execute across every connected system in minutes.
- 
Humans and service accounts, one set of workflows.
 Employees, contractors, and service accounts all run through the same joiner-mover-leaver automations, with scoped access and clear ownership. No separate tool for the non-human ones.
- 
Risk and hygiene, handled continuously.
 Workflows scan for local accounts, unused permissions, dormant licenses, and toxic grants, then auto-remediate or route for review the moment one appears.
- 
Workflows on demand, no admin access required.
 Users and agents safely trigger the workflows they need, like contractor onboarding, immediate offboarding, or group creation, with policy-based approval routing and full audit logging built in.
- 
Custom logic, right inside the workflow.
 When out-of-the-box steps fall short, drop in a Function to handle edge cases like cost-threshold checks or custom username schemes, with logging, versioning, and secrets management handled automatically. Let AI write the code.

Identity automation to power your agentic transformation

Every identity workflow that still depends on a ticket, a spreadsheet, or someone remembering to act is a security gap and an AI transformation roadblock. C1 Automations turns lifecycle management, risk remediation, license cleanup, and requestable operations into workflows that run themselves, across every identity type and system, on one control plane. Identity stops being a set of processes to work through and becomes the infrastructure continuously supporting your business.

 **Instacart**

“C1 is extremely customizable, very powerful, and doesn’t make assumptions about how your organization works.”

Matthew Sullivan Infrastructure Security Team Leader, Instacart

About C1

C1 empowers organizations to adopt AI securely and at speed by delivering the right access and context to every human, workload, and agent. Companies like Instacart, Ramp, Zscaler, and Brex trust C1 to accelerate AI adoption with confidence. Learn more at c1.ai.

Scale access at the speed of AI
