

SOLUTION BRIEF

AI-Native Identity Governance for GRC

Lower compliance costs, reduce administrative drag, and guarantee compliance across every identity.

The new reality of access compliance

Regulatory frameworks keep expanding, but the tools and processes most GRC teams rely on haven't kept pace. Evidence collection still means exporting logs from dozens of systems, reconciling datasets in spreadsheets, and assembling artifacts under deadline pressure. Access certifications fatigue reviewers, who rubber-stamp decisions without the context to make meaningful judgments, and traceability breaks down the moment a campaign closes.

And now AI agents are proliferating across environments that traditional governance platforms were never designed to cover. Custom infrastructure, unmanaged MCP connections, and autonomous agents create compliance blind spots. Only 21% of organizations have formal policy guardrails on what agents can do autonomously, and every AI agent action is an audit exception in waiting.¹ The compliance surface has outgrown the compliance program.

Automate compliance and extend it to AI

Streamline audits

Replace manual, point-in-time reviews with continuous control and autonomous review campaigns. Log every action and change as it happens, and generate audit reports on demand.

Optimize GRC resources

Automatically revoke denied access and automate evidence collection so your team can focus on strategic risk mitigation.

Future-proof AI compliance

Prove definitive control over your AI footprint. Govern agents as first-class identities and maintain a complete, audit trail for every AI tool and agent action.

Move from compliance theater to continuous assurance and security with C1

C1 replaces the manual, fragmented compliance workflows that consume GRC resources with a platform that enforces policy continuously, automates evidence generation, and extends governance to AI agents the moment they go live. Instead of manually collecting audit evidence, compliance teams pull timestamped, attributed evidence on demand. Blanket certification campaigns that produce rubber-stamped approvals are replaced by targeted, risk-based reviews automatically routed to the right owners with full context.

And instead of building a parallel governance program for AI, C1 brings every agent action, MCP connection, and tool call into your existing framework. You get a compliance program that is not only easier to manage, but operates as a continuous security control, ensuring the organization is secure.

Why C1 for Risk & Compliance

Autonomous access reviews that improve outcomes

Scope reviews in minutes and schedule campaigns to launch automatically. Auto-route review tasks to system owners with AI-powered recommendations that accelerate certifications while eliminating rubber-stamping. Revoked access is deprovisioned automatically. No tickets, no cleanup.

Proactive detection of separation of duties violations

Automatically monitor and flag toxic access combinations across applications. C1 alerts approvers before toxic access is granted and surfaces existing SoD violations before auditors find them, turning what was a reactive finding into a proactive control.

AI and human compliance in one platform

Every MCP connection, tool call, and agent action is logged, policy-enforced, and auditable. The AI footprint expands the compliance surface without requiring a parallel program or separate evidence trail.

Real-time, dynamic policy enforcement

Define access policies once and C1 enforces them across every identity and system. Access adjusts automatically when an identity's context changes — role, department, risk signal — so there's no drift between reviews and no gaps for auditors to find.

Auditor-ready evidence on demand

Every event and action is logged and auditable. Generate audit-ready reports on demand and answer auditor questions with data, not guesswork. Timestamped, attributed evidence is generated in a click.

Measureable impact with C1

Traditional compliance programs were built for human users and annual review cycles. That model doesn't hold when AI agents are accessing sensitive systems at machine speed and regulators are extending their expectations beyond human identities. C1 brings every system, every identity, and every access decision into a single evidence trail. Your compliance program grows with your environment instead of racing to catch up. Streamline audit execution, accelerate remediation, optimize GRC resources, and future-proof compliance for AI.

TREASURE DATA

“By using C1, we're not doing compliance theatre, we're getting a level of depth that actually matters.”

Ryan Schoeller Director, Security, Governance, Risk & Compliance

About C1

C1 empowers organizations to adopt AI securely and at speed by delivering the right access and context to every human, workload, and agent. Companies like Instacart, Ramp, Zscaler, and Brex trust C1 to accelerate AI adoption with confidence. Learn more at c1.ai.

Scale access at the speed of AI
