Legacy IGA wasn't built for how IAM engineers work today

The board wants AI deployed across the org by Q4. Security needs every AI tool request to go through an approval queue. Employees who can't wait are already using AI tools with corporate data. As AI adoption accelerates, IAM engineers are left scrambling to deliver enterprise-grade governance with tools designed for a different era.

Legacy IGA platforms that require long, drawn-out implementation and ongoing services just to reach baseline coverage are non-starters in the AI era. IAM teams need quick, complete coverage across complex environments, and automation that keeps governance moving at engineering speed, without adding overhead. To keep up with AI, identity must operate like infrastructure, securing every identity across every system so the business can move forward faster.

Governance that moves as fast as the business

Onboard and offboard in minutes

Automate lifecycle workflows that give new hires and agents the right access from day one, right-size access as roles change, and deprovision immediately upon departure.

Drive productivity and end ticket backlogs

Self-service requests and automated approvals give users and agents access in seconds from the tools they already use: Slack, Teams, CLI, or MCP.

Generate audit evidence on demand

Every action is logged, access reviews run autonomously, and configuration changes are code-reviewed, traceable, and exportable. No spreadsheets required.

C1 gives IAM engineers a governance platform built for AI velocity

C1 replaces legacy and siloed governance tools with an identity platform IAM engineers want to operate. More than 300 prebuilt connectors deliver quick visibility and control across every identity and system. A native Terraform provider lets engineers configure policies, connectors, and workflows as code, with version history, peer review, and rollback built in.

End-to-end automation handles the full access lifecycle. Reviews are scoped in minutes and routed to reviewers with AI recommendations that accelerate completion times. AI adoption is unblocked, because AI agents and tool calls are governed with the same rigor as human identities. It's governance at the speed the business requires in the AI era.

Why C1 for IAM Engineers

Coverage for every app

Connect SaaS, cloud, on-prem, and custom applications out of the box. AI-configured connectors extend coverage to long-tail and homegrown systems without professional services or custom development work, making it easy for governance to reach every application.

End-to-end automation

The access lifecycle runs itself. New hires get in, departures get out, and roles stay calibrated without anyone chasing tickets. Engineers and AI agents work with exactly the access the task requires, nothing more. Reviews close on time, surface real risk, and deprovision automatically.

GitOps for identity

Manage your entire IAM configuration the way you manage infrastructure: as code. C1's native Terraform provider lets you configure connectors, policies, workflows, and more, review changes through pull requests, and roll back instantly. Identity governance lives in the same repo and review process as the rest of your stack.

Identity as infrastructure, built for humans and agents

Every C1 capability is available via REST API, MCP, CLI, and Terraform. The console renders the same APIs your workflows call. Identity becomes a unified control plane that's programmable as infrastructure, not a portal you have to click through to configure.

Measureable impact with C1

C1 transforms IAM engineering from a reactive, ticket-driven function into automated, scalable operations. New hire provisioning completes in minutes instead of days. Helpdesk tickets for access requests drop as self-service and automation handle the volume. Audit evidence is generated continuously and available on demand, eliminating the manual scramble before compliance reviews. And as new applications and AI tooling are added, governance scales seamlessly, improving the IAM engineers work experience.

“With C1, approvals are automated, training assignments are automated, and provisioning is automated. New hires get access to all the apps they need within minutes.”

Rashmi Bilgundi Director of IAM, Zscaler

About C1

C1 empowers organizations to adopt AI securely and at speed by delivering the right access and context to every human, workload, and agent. Companies like Instacart, Ramp, Zscaler, and Brex trust C1 to accelerate AI adoption with confidence. Learn more at c1.ai.

Scale access at the speed of AI
