Modernizing identity for scalable growth

An enterprise customer will ask for SOC 2 evidence. An auditor will ask who has access to what. The board will ask how fast AI tools are being adopted. Growing companies that can't answer these questions won't last long. But lean IT and security teams at smaller companies are quickly stretched thin, managing access through manual tickets and ad hoc processes that drain time and impact productivity. Every new hire, role change, or offboarding becomes a bottleneck when there's no automation behind it.

Meanwhile, employees are adopting AI tools on their own, introducing risks the business can't see. And trying to build enterprise-grade access controls internally — the kind auditors and customers expect — pulls engineering resources away from the core business. The result is a widening gap between the identity maturity the market demands and the capacity a growing team can deliver.

Accelerate your business engine

Maximize time to value

Realize operational ROI right away. C1 integrates directly with your existing directory and tech stack to instantly automate your access controls.

Unlock secure AI adoption

Safely power your AI transition. Give your team governed access to approved AI apps, backed by automated guardrails and verifiable audit trails.

Streamline enterprise readiness

Prove your strong security posture to auditors and customers. Stay continuously compliant and generate the evidence needed for compliance frameworks like SOC 2 and external vendor reviews.

C1 gives growing companies enterprise-grade identity without enterprise complexity.

C1 is the identity platform built for teams that need to move fast without sacrificing security or compliance. Instead of stitching together manual processes and point tools, growing organizations get a single platform that automates the entire identity lifecycle, from day-one provisioning to complete offboarding. Self-service access requests resolve in seconds from the tools employees and agents already use — Slack, MS Teams, CLI, MCP — eliminating helpdesk bottlenecks.

AI tool calls are governed with full audit trails, so innovation doesn't come at the cost of compliance. And C1's prebuilt connectors and guided deployment mean you're live in days, not months. C1 gives you enterprise capabilities built for agility, so you can evolve fast and stay ahead of risk, without adding headcount.

Scale access at the speed of AI

Why C1 for small and midsize businesses

Automated access that drives productivity

Streamline joiner-mover-leaver workflows so every new hire has the right access on the first day, and keep work moving with auto-approved self-service requests via Slack, MS Teams, CLI, MCP, and web app.

Compliance evidence on autopilot

Generate the access review evidence, audit trails, and policy documentation that auditors and enterprise customers demand. Replace compliance pain with a continuous, automated process.

Rapid deployment with expert guidance

Out-of-the-box connectors, AI-guided onboarding, and dedicated support when you need it get you live fast. C1 works seamlessly with your existing tech stack and security policies, so you start seeing ROI immediately.

Fast, governed AI adoption

Give employees an easy, approved path to the AI tools they need, with policy-based controls and full audit trails. Shadow AI adoption drops when the governed path is frictionless, and compliance teams get the visibility they require.

Identity that integrates with your stack

C1 exposes every capability via API, CLI, Slack, Teams, and MCP, so access management fits programmatically into the tools your team already uses and runs how your business runs.

Measureable impact with C1

C1 gives small and mid-size businesses the identity infrastructure to grow without outgrowing their security posture. Automated lifecycle workflows, governed AI access, and continuous compliance evidence mean your team operates with the rigor of an enterprise — at the speed and cost your business requires. As headcount grows, new tools are adopted, and AI agents enter the workforce, C1 scales with you.

“C1 integrated out of the box with what we needed, and it just connected really easily as part of our layered defenses. Set up two policies, bang bang, and it all worked.”

Spiros Andreou Director of Security and Compliance

About C1

C1 empowers organizations to adopt AI securely and at speed by delivering the right access and context to every human, workload, and agent. Companies like Instacart, Ramp, Zscaler, and Brex trust C1 to accelerate AI adoption with confidence. Learn more at c1.ai.
